

Patient Transfer System

Think green, use pink

What is the Pink Slip™?

The all new recyclable Pink Slip™ is a friction reducing device with HD Poly Warm-Touch Technology™, and has one of the lowest slip index ratings on the market. It glides against itself, making patient transfer and repositioning easier to accomplish by caregivers and more comfortable for patients.

Highest User Compliance

Always available, the Pink Slip™ gets used! Individually packaged in a ready-to-use StatPak™, the Pink Slip™ fits in a pocket or dispenser for immediate use. No slings to track down, no dead batteries, no tricky connections, you can depend on Pink Slip™ to be ready when you are.

Patient Comfort

The HD Poly Warm-Touch Technology™ minimizes friction and enhances patient comfort. The slippery inner surface of the Pink Slip™ slides against itself, not the patient, reducing the risk of skin shear. Plus, transfer and repositioning is accomplished easily, helping reduce patient anxiety.

Packaging Options

633010

633011

633026

Single Patient Use

The Pink Slip™ is designed to be reused when transferring or repositioning the same patient which reduces cross contamination risks associated with reusable products.

Completely Recyclable

With a Resin Recycle Code of , the Pink Slip™ is an important part of any "Green Initiative" program. It takes up little recycle bin space and has a tiny carbon footprint compared to other patient handling devices.

Cost Effective

The Pink Slip™ is a fraction of the cost of ceiling track lift systems or air transfer technologies. No capital investment, no messy installation, no need for electrical plug-ins or noisy compressors. The low cost Pink Slip™ can be used multiple times on the same patient, eliminating the cleaning costs associated with reusable products.
